Product Information CLEANLine Backpack Sprayer 315 A

CLEANLine

The backpack sprayer Solo 315A Cleaner is a very robust unit from the comprehensive Solo Cleanline product range. It is designed and manufactured for the professional operator in the cleaning and disinfection industry. This model is comfortable to operate and is made from chemical resistant materials.

Operational advantages

- Perfectly suited for the professional application of cleaning and disinfection liquids.
- The large tank capacity is matched to also spray larger areas quickly and effectively for sanitation purposes, for baths, machinery and stainless steel fittings, vehicle cleaning.
- Ideal for the application of disinfection chemicals for disease control over larger surfaces.
- The high value FKM seals are suitable for the output of neutral and aggressive cleaning chemicals within the range of strongly acidic to lightly alkaline, i.e. for the removal of lime residues and water spots. They are also resistant against many hydrocarbons (products that contain oil and solvents) as well as many disinfection chemicals.

Product details

- The stable liquid tank features integrated fill level markings. The substantial tank walls are made of UV stabilized polyethylene.
- The sprayer boasts a comfortable, foldable carry handle for easy transport to and from the work site. The carry handle contains a fixture to safely store any of the spray wands that are available from the SOLO Accessory range.
- The pressure range can be easily adjusted to 4 different settings with a twist knob on top of the pressure vessel inside the tank. The required pressure is generated by an efficient and chemical resistant piston pump.
- A high value, chemical resistant flat spray nozzle produces fine droplets to apply the cleaning or disinfection solution neatly and evenly in a band-like spray picture. This allows progressive and uniform application with potentially less spray volume.
- The pump lever is shaped ergonomically and can be adjusted to 4 different settings. The pump lever can also be mounted on either side of the sprayer and the spray pressure can be obtained without fatigue.
- A transparent and strong re-enforced delivery hose allows a sufficiently large operating range.

Large, folding carry handle with integrated wand holder.

Pump lever allows multiple settings for ergonomic operation.

Model	315 A
Part no.	31503
Piston pump	●
Nominal tank volume	15
Adjustable spray pressure	1 - 4
Spray wand length cm	50cm, plastic, non-corrosive
Delivery hose length m	1,4
Weight, empty kg	4,5
Nozzle, fitted	high grade, chemical resistant SOLO flat spray nozzle
