German quality sprayers and cut-off machines

Product Information

Professional Pressure Sprayers

256 / 257 / 258

Model Update
available as of June 2021

SOLO pressure sprayers 256, 257 and 258 are very robust pressure sprayers for commercial use and for the demanding, quality focused private operator.

Well suited for the professional use in plant protection applications, for medium sized areas, in green houses, tree nurseries, market gardens and for the landscape industry.

Plus points for their use

- Suitable for the application of all approved plant protection chemicals.
- Proven over many years for professional use in the garden industry for example.
- Very robust design, models 256 and 257 with new look with stable, extended base.
- Uniquely robust, now with lower weight. Ideally suited for intensive use under professional operating conditions.
- Transparent container with imprinted fill level scale and made from UV stabilized polyethylene material.
- Pump handle with carry handle is made of highly impact resistant plastic material.

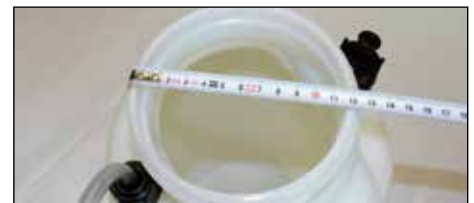

Exceptional equipment

- The pump unit can be completely separated from the container with a screw lid.
- An 11cm wide filler opening allows quick and safe refilling as well as easy cleaning of the container.
- The pressure sprayer can be carried along over the shoulder quite comfortably with the 1.6m long and wide carrying strap.
- A high performance, easy moving pump system with a stroke volume of ca. 340 cm³ provides swift and effective pressure build-up. The foot rests integrated on the base of the container facilitate the pumping process.
- The large and very sturdy pump handle incorporates two clamp inserts to easily attach all SOLO spray wands for safe and easy transport. With a quarter of a turn the pump handle can be literally changed from a pump handle to a carrying handle.
- Easy and simple to operate and with automatic pressure relief valve to reduce or release the pressure after finishing the spraying operation.

- A robust, non-buckling, transparent and fabric re-enforced 1.4 m long hose provides a wide operating radius.
- A very robust and comfortable hand valve with operating lock makes the job easy and stress free.
- The spray wand is non-breakable and is made of chemical resistant plastic material.
- A two piece hollow cone nozzle and a flat spray nozzle come with the pressure sprayer.

Accessories

- A comprehensive range of accessories is available for the pressure sprayers SOLO 256, 257 and 258. Apart from various spray lances and spray nozzles there is, for example, a special connector for external compressed air supply or a wheel set for a simple and relaxed transport of the model 258.
- The supply of spare parts for these products is guaranteed for many years.

Extremely robust container with very large filler opening.

Optional accessory:
Valve for external compressed air supply to avoid manual pumping

Large volume pump unit

NEW:
Stable,
wide base
